

David Doscher - Senior Systems Engineer

As a senior systems specialist, David has developed and managed numerous successful projects featuring software design, production and training. With extensive experience and intuitive knowledge in data processing and analysis, David has the ability to engineer comprehensive solutions for a variety of applications across a diverse array of industries.

Whether integrating new components or solutions into existing environments or creating expansive new workflows, David approaches every project with a unique perspective that combines enthusiastic creativity with technical discipline to deliver efficient and highly functional projects.

Building on the HCS philosophy of holistic project management, David takes ownership of every phase of a project, including the intangibles and unforeseen variables. While this approach may seem overly ambitious, it is essential to produce successful outcomes regardless of the challenges presented.

Professional Experience - Highlighted Projects Include:

- Henry Schein: Developed and deployed several database solutions including a comprehensive digital asset management system integrated with existing publishing systems.
- NASA: Developed Digital Asset Management solution using Canto Cumulus and provided training and support services for staff.
- U.S. Steel: Developed enterprise Digital Asset Management solution with integrated training and support services.
- Barnes & Noble: Developed custom integration of Canto Cumulus for digital asset management.
- Holtzbrink Publishing Group: Custom integration of Canto Cumulus with Oracle databases.
- Client Support: As an Apple Certified Technical Coordinator, David provides technical support and intuitive troubleshooting skills for HCS clients.
- WWE: Designed and built an enterprise level Digital Asset Management solution with the ability to ingest and manage a large volume of material.
